

# Calfmilco Water Buffalo Milk Replacer

## Calfmilco Water Buffalo

is formulated specifically for water buffalo calves who require higher solid levels in their milk. It has a high level of skim milk, and supplies a high, energy-dense milk that promotes optimal growth and performance. The mineral and vitamin levels are specifically tailored to the needs of water buffalo calves.

Protein content

24%

Fat content

22%

## The Difference

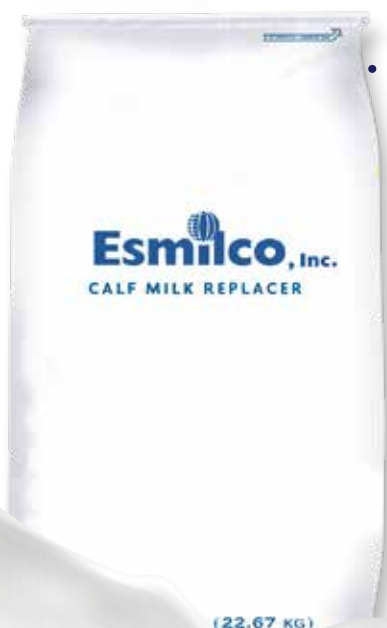

We use edible grade milk ingredients including skim milk and whey protein concentrate.

A high fat level is utilized for the specific needs of Water Buffalo calves.

Fats are incorporated into the milk replacer by both cold processing and spray drying which encapsulates the fats and aids in optimal and consistent absorption of nutrients.

Our products are mildly acidified and fortified to support optimum protein digestion as well as form a natural barrier against pathogens.

Includes Calfmilco Summit Pack. This is a combination of nutritional supplements to naturally support a healthy and efficient digestive system.

## Features & Benefits

### Protein

24% protein, with a high percentage from skim milk for a medium to high feeding schedule.

### Palm and coconut oil

Long and short chain fatty acids, mirroring whole milk, result in easier digestibility.

### Additional amino acids

A combination of essential amino acids which the calf can synthesize.

### Vitamin and mineral profile

Specific to WB-Meets nutritional needs to provide optimum growth and complete nutrition.

### Chelated trace minerals

Better utilization and absorption of nutrients and enhancement of the immune system.
