

# Lamb Milk Replacer

## Lamb Milk Replacer

is formulated to meet the entire nutritional requirements of lambs from the second day of life to weaning. It is the ideal replacement for ewe's milk as it contains low levels of lactose. this is very important as lambs are relatively intolerant to lactose.

## The Esmilco Difference

We understand the importance and impact of optimum nutrition on your business.

We use edible grade milk ingredients including skim milk and whey protein concentrate.

Fats are incorporated into our milk replacers by both cold processing and spray drying to help ensure nutrients are unharmed and at their optimum value for a more even absorption of energy by the calf.

Our products are mildly acidified and fortified to support a healthy and efficient working digestive system.

All our products are available with Summit Pack, our exclusive combination of natural feed supplements designed to support a healthy and efficient digestive system.

All Esmilco brands can be customized; we know each farm is unique.

## Features & Benefits

Milk protein	Allows for easy digestibility and outstanding performance
Palm & coconut oil	Long and short chain fatty acids, mirroring whole milk, resulting in easier digestibility
Vitamins & minerals	A combination promoting optimum growth and complete nutrition
Chelated trace minerals	Better utilization and absorption of nutrients, and enhancement of the immune system
Probiotics	Active ingredients that help promote a healthy digestive system

# Lamb Milk Replacer

## Why use Lamb Milk Replacer?

The ewe is often unable to supply enough milk for her lambs, especially from more prolific breeds producing triplets and quads. To reduce the pre-weaning mortality, it becomes necessary to rear a part of the lambs away from the ewe. By rearing part of the lambs on our specially formulated lamb milk replacer, the amount left for the lambs on the ewe increases, enabling them to grow faster.

## Guaranteed Analysis

Crude Protein, min .....	22%
Crude Fat, min .....	23%
Crude Fiber, max.....	0.1%
Calcium .....	0.80%
Phosphorus.....	0.65%
Vitamin A, min .....	25,000 IU
Vitamin D3, min.....	5,000 IU
Vitamin E, min .....	80 mg

## Management tips

-  Lamb milk replacer can be used to save orphan lamb, weak lambs, unclaimed lambs and lambs from multiple births
-  Newborn lambs should receive the first colostrum feeding within 3 hours after birth. Feed colostrum for at least the first 24 hours of life.
-  Provide a dry, warm and draft-free pen to start lambs on Lamb milk replacer
-  Provide a high quality starter feed at one week of age. Lambs should be offered fresh water free choice
-  Keep milk replacer feeding equipment clean
